

Pueblo Chemical Agent-
Destruction Pilot Plant

PUEBLO

A PARTNERSHIP FOR SAFE CHEMICAL WEAPONS DESTRUCTION

THE EDUCATIONAL OUTREACH PROGRAM

The Pueblo Chemical Agent-Destruction Pilot Plant will be built to dispose of the chemical weapons that have been stored at the U.S. Army Pueblo Chemical Depot since the 1950s. This facility will safely destroy the depot's stockpile of chemical weapons.

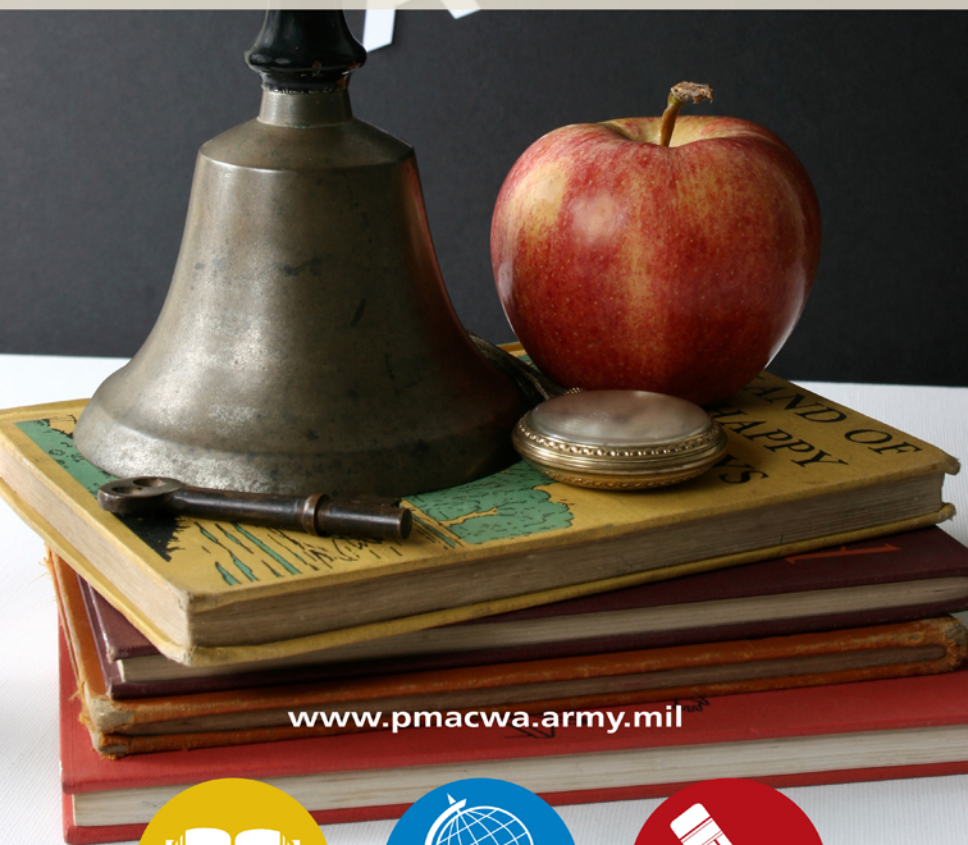

The Pueblo Chemical Stockpile Outreach Office provides presentations to local school students from fifth grade through high school to help them learn about the project, as well as future job opportunities.

In the classroom, they discuss a variety of topics, including history of the depot, the Pueblo chemical stockpile destruction project, history of chemical warfare, sustainable development and the people and organizations involved.

The presentations have learning objectives that correlate with the Colorado Model Content Standards for Social Studies in the areas of civics, economics, history and geography.
